

CELLULAR NETWORK SERVER

This project manages the message and call service between different clients. It supports following features:

1. Add new user
2. View user profile
3. View list of existing users
4. Send a text message
5. Receive a text message
6. Make a voice call
7. Receive a voice call

How does the project work?

- Setup the project by importing necessary libraries
- Run the client file in the terminal for each client
- Create a new user by providing information about the user or view the existing user list.
- Select a user from the existing users list by entering the name and password of the user.
- Now use any of the services by selecting the appropriate option from the menu.
